

## **CAMPING ÀMFORA ENVIRONMENTAL POLICY**

In view of our very privileged geographical location in one of the best-known natural areas of Catalonia, we have decided to participate with both enthusiasm and conviction in this environmental policy.

We hereby undertake to develop our activity with the greatest of respect for the environment wherever this is technically possible.

We recognize our responsibility towards the environment and have, therefore, decided to fix the following objectives:

1. To apply the regulations in accordance with our environmental context.
2. To promote and manage the reduction and re-cycling all waste produced by the campsite in order to control it in the best way.
3. To continue to instigate adequate measures to decrease water and energy consumption.
4. To treat waste water correctly.
5. To involve all staff whose professional activity is linked to the environment
6. To heighten staff awareness and train them with a work-shop how to respect the environment.
7. To inform the guests of the environment surrounding the campsite in order to ensure that they respect it.
8. To inform the suppliers of their responsibilities and obligations towards the environment.
9. To use guest contact as a means of communication and education regarding environmental respect.
10. Annual review of the implemented emergency plan and training and outreach of the employers.
11. Promote the conservation of biodiversity in order to increase the ecological potential of the full camping.
